

ICE Technologies Builds New Corporate Headquarters

PELLA, IOWA – (Sept. 10, 2008) – ICE Technologies, Inc., the leading provider of Information Technology services to community healthcare providers today announced the building of its headquarters office in Pella, Iowa. A dramatic increase in demand for the company’s solutions in the last several years necessitated a move to the new 7,600 square foot facility.

More than twice the size of the company’s previous office, the new facility includes a state of the art hardened data center designed to serve information backup, disaster recovery, and healthcare software hosting solutions for community hospitals.

“With the rapid adoption of critical software tools such as Electronic Medical Records, community healthcare providers are looking for ways to remove increasing IT complexity from their facility and place it in an environment where it can be secured and professionally managed. Our new data center offers providers a solution from a company they recognize as the leader in community healthcare IT services.” said Keith Van Donselaar, President of ICE Technologies. “In addition to the data center, the new office will offer us more space for our healthcare helpdesk support staff, technology staging areas and training rooms.”

The company’s staff, which has grown from 14 employees in 2003, is expected to reach more than 40 by the end of the year.

About ICE Technologies

For nearly 20 years, ICE Technologies has helped rural and community healthcare providers meet their distinct information technology challenges. ICE’s team of experienced security experts, systems engineers and healthcare consultants has been assisting community hospitals align technology with the needs of their organization by providing solutions that range from CIO-level advisory services, project management and software selection assistance, to the ongoing administration of healthcare information systems and networks.
